

# TOP DOG

2-4 Players Comparing Ages 7+

**Goal:** Win the most cards when the value in the chosen category on your card is larger than your opponent's value.  
(Played like WAR)

- Cards are equally divided and remain in a pile in front of the players.
- Any ONE numerical category is chosen (Population, Area, Union Entry, etc.)
- Players take the top card from their pile, turn it over and compare the values of the chosen category.
- The player with the highest value wins all the cards and puts them in a separate pile.
- If 2 or more players have equal values on their cards, (a tie) ALL players in the tie play another card. Again, the highest value gets ALL the cards.
- When all cards have been played, players count the number of cards they won.
- The player with the most cards wins the game.

\*\*\***OPTIONS:** Other values not obviously shown on the cards may be used.

They are:

- *Alphabetical order of the State or Capital*
- *The number of letters in the State or Capital*
- *The highest DIFFERENCE in high and low Temperatures*
- *The sum of the digits in the year of Union Entry*
- *The sum of the digits in the Area*
- *Alphabetical order of the Flower, Bird, or Tree*
- *The population density of the state (population ÷ square miles)*

Etc. 😊
